

Church Van Improvements

The United Methodist has improved the van by installing a running board, a lower step, and a grab bar. The changes were made to make the van more accessible to senior citizens who had found the van too difficult to enter or exit. All who have tried the upgraded van have liked the improvements. The two photos below show the van as it looks now.

The detail photo shows the lower step, running board and the floor to ceiling safety yellow grab bar. There is a shorter running board on the driver's side as well and a second short grab bar mounted to the left of the rear passenger door.
